

Sketch a pie chart showing the gases present in the air today.

Describe how the earth's atmosphere has changed and what has caused this change.

C6.2 Interpreting and interacting with Earth systems

How is acid rain caused?

How can salt water be turned into usable water?

How is carbon monoxide formed?

What problems does it cause?

What is global warming?

What are particulates?

What problems do they cause?

Where do we get drinking water from?

Describe the stages of water purification

What is the greenhouse effect?

What can be done to reduce global warming?
